

SAMUEL BALDASSO

Software Engineer II | Java Backend | Spring Boot | Microservices | AWS | Distributed Systems

Rio de Janeiro, Brazil (Remote-ready) | baldassosamuel93@gmail.com | linkedin.com/in/samuel-baldasso | github.com/samuelbaldasso

PROFESSIONAL SUMMARY

Software Engineer specializing in Java backend engineering, scalable APIs, microservices, and cloud-based systems. Mid-level professional (Band 6B) with 5+ years of professional software engineering experience across enterprise software and consulting environments, including IBM and NTT DATA.

Experienced in Java, Spring Boot, REST APIs, Kafka, AWS, Docker, CI/CD, and enterprise integration, with a strong foundation in Clean Architecture, distributed systems, testing, and observability. Experienced in translating business requirements into maintainable backend services, integrations, and production-ready software.

Fluent in English (C1) and Spanish (B2), targeting international mid-level Software Engineering and Java Backend opportunities.

TECHNICAL SKILLS

Backend: Java, Spring Boot, Quarkus, REST APIs, Microservices, JAX-RS, Kafka, Distributed Systems

Infrastructure & Data: AWS, Docker, CI/CD, PostgreSQL, MySQL, MongoDB, Flyway

Testing & Observability: JUnit, Mockito, Testcontainers, Prometheus, Grafana, ELK Stack

Additional: TypeScript, Node.js, React, Angular, Kotlin, Android

EXPERIENCE

Software Engineer II - Backend / Enterprise Software | IBM

May 2025 - Present | Rio de Janeiro, Brazil

- Develop and evolve backend services and enterprise integrations in production-oriented environments, with emphasis on API design, maintainability, reliability, and observability.
- Work with backend technologies including Node.js, TypeScript, REST APIs, and enterprise integration tooling, with exposure to Java/Spring-based services and broader cloud engineering practices.
- Collaborate with senior engineers and cross-functional teams on technical implementation, troubleshooting, incident resolution, and software delivery.
- Contribute to production reliability and operational visibility using AWS and observability tooling such as Prometheus, Grafana, and ELK.
- Participate in the evolution of backend integrations and service workflows, improving maintainability, operational visibility, and delivery efficiency.

Software Engineer II - Java Backend | Independent Consulting

Oct 2024 - Apr 2025 | Sao Paulo, Brazil

- Developed and improved Java backend APIs for enterprise consulting projects, focusing on maintainability, performance, scalability, and reliable service design.
- Refactored backend workflows and integration layers to address bottlenecks and improve system throughput.
- Strengthened CI/CD automation and delivery pipelines supporting reliable software releases.
- Developed enterprise web modules using Java and Angular, integrating backend business logic with modern web interfaces.
- Collaborated with project stakeholders and engineering teams to translate business requirements into maintainable software solutions.

Software Engineer I - Enterprise Software | NTT DATA

Apr 2022 - Oct 2024 | Uberlandia, MG, Brazil

- Developed and maintained enterprise software across Java, web, and mobile environments for large organizations.
- Worked with Java EE in enterprise systems integrated with databases, legacy infrastructure, business rules, and production workflows.
- Developed features involving backend integration, APIs, business logic, and enterprise application workflows.
- Collaborated with multidisciplinary teams across backend, frontend, mobile, QA, and architecture.
- Progressed from Android Mobile Intern to Junior Software Engineer within six months, taking increasing ownership of production software delivery.

SELECTED OPEN SOURCE PROJECTS

Java Banking Ledger Core System | Open Source Project

| github.com/samuelbaldasso

- Developed a double-entry ledger using Clean Architecture and Domain-Driven Design (DDD).
- Implemented the Transactional Outbox pattern with Kafka and PostgreSQL to maintain consistency between transactional database updates and event publication.
- Implemented pessimistic locking with deterministic lock ordering to reduce deadlock risk.
- Implemented AES-256 encryption at rest and OAuth2/JWT authentication using Keycloak.

Springify - CLI Architecture Tool | Open Source Project

| github.com/samuelbaldasso

- Created and published an open-source Java CLI that automates the generation of package structures following Hexagonal Architecture for Spring Boot applications.

EDUCATION & CERTIFICATIONS

Bachelor of Information Systems - FeMASS, Macae, Brazil | Graduated June 2023

AWS Certified Cloud Practitioner - Amazon Web Services

English: C1 - Full Professional Proficiency | Spanish: B2 - Professional Working Proficiency
